## Search Notes

Examiner Garrett,

If you have any questions or if you would like to refine the search query, please feel free to contact me.

Thank you for using STIC services!

Mei Huang

## SEARCH REQUEST FORM

## Scientific and Technical Information Center

Requester's Full Name: DAWN GARRETT Examiner #: 76107 Date: 1/23/2006  
 Art Unit: 1774 Phone Number 2-1523 Serial Number: 10/780,436  
 Mail Box and Bldg/Room Location: Rensselaer/OC 79 Results Format Preferred (circle): PAPER  DISK  E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Anthracene Derivative Host Having Ranges of Dopants

Inventors (please provide full names): Michele Ricks, Tukaram Hatwar,

Jeffrey Spindler, Lelia Cosimides

Earliest Priority Filing Date: 2/17/2004

\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please search formula (I) attached

AB A color OLED display is described having at least 3 different colored microcavity pixels including a light-reflective structure and a semitransparent structure comprising an array of **light-emitting** microcavity pixels each having one or more common org. **light-emitting** layers, the **light-emitting** layer(s) having 1st, 2nd, and 3rd **light-emitting** materials that produce different light spectra. The 1st **light-emitting** material producing **light** has a 1st spectrum portion that is substantially contained within a 1st color of the array, the 2nd **light-emitting** material producing **light** has a 2nd spectrum portion that is substantially contained within a 2nd color that is different from the 1st color, and the 3rd **light-emitting** material producing **light** has a 3rd spectrum portion that is substantially contained within a 3rd color that is different from the 1st and 2nd colors.

AB The invention refers to a white org. electroluminescence device comprising a neg. electrode and a pos. electrode and, interposed there between, one or more org. thin film layers including at least a **light emitting** layer, wherein the **light emitting** layer is constituted of a laminate of blue color **light emitting** layer and yellow-to-red color **light emitting** layer and contains an asym. condensed-ring-contg. compd. This white color org. electroluminescence device realizes reduced chromaticity changes and excels in luminous efficiency and thermal stability, ensuring strikingly prolonged service life.

AB White light-emitting org. light-emitting devices including spaced apart anodes and cathodes, and having blue light-emitting and yellow, orange, or red light-emitting layers are described in which the blue light-emitting layer includes a host material comprising a monoanthracene deriv. are described by the general formula I (R1-8 = H; R9 is not the same as

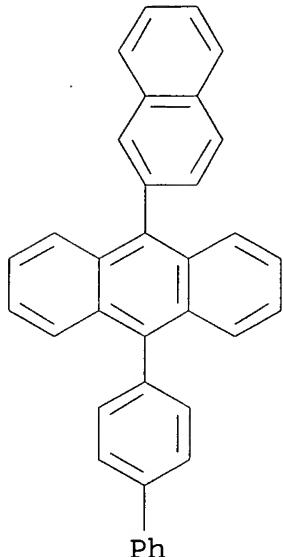

R10; R9 = a naphthyl group having no fused rings with aliph. carbon ring members; and R10 = a biphenyl group having no fused rings with aliph. carbon ring members; and R9 and R10 are free of amines and sulfur compds.). The devices may be provided with color filters. Displays and area lighting systems incorporating the devices are also described.

AB Disclosed is a **light-emitting** material for org. **electroluminescent (EL)** devices which is composed of an asym. anthracene deriv. of a specific structure. Also disclosed are a material for org. **EL** devices and an org. **EL** device where an org. thin film layer composed of one or more layers including at least a **light-emitting** layer is interposed between a cathode and an anode. At least one layer of the org. thin film layer contains the material for org. **EL** devices by itself or as a component of a mixt. Consequently, the org. **EL** device has a high luminous efficiency and a long life. Also disclosed are a **light-emitting** material for org. **EL** devices and material for org. **EL** devices which enable to realize such an org. **EL** device.

AB A white org. electroluminescence device comprising, between a pair of electrodes,  $\geq 2$  **light-emitting** layer and an electron transport layer made of a N-contg. heterocyclic deriv. or a Si-contg. heterocyclic deriv. The energy gap of the host material contained in the **light-emitting** layers is limited in a specific range, and the energy gap of the N-contg. heterocyclic deriv. or a Si-contg. heterocyclic deriv. contained in the electron transport layer is limited in a specific range. The ionization potential of the N-contg. heterocyclic deriv. or Si-contg. heterocyclic deriv. of the electron transport layer and that of the host material of the **light-emitting** layer in contact with the electron transport layer satisfy a specific relation. The white org. electroluminescence operates on low voltage at high luminous efficiency, have a long life, and does not change in chromaticity.

AB Org. electroluminescent devices are described which comprise a substrate; a first and second electrodes formed on the substrate; an emitting layer formed between the first electrode and the second electrode, the emitting layer having a plurality of materials one of which being a blue-emitting dopant with general formula (I), where at least one of A1 and A2 is selected from a substituted or non-substituted arom. group, a heterocyclic group, an aliph. group and hydrogen. The materials forming the emitting layer together

with the material of I may have a chem. formula B1-X-B2 where X is selected from a group consisting of naphthalene, anthracene, phenanthrene, pyrene, perylene, and quinoline and at least 1 of the B1 and B2 is selected from a group consisting of aryl, alkylaryl, alkoxyaryl, arylaminoaryl and alkylaminoaryl.

AB Title electroluminescent elements comprise one pair of electrodes and pinched between the electrodes,  $\geq 1$  layer(s) contg.  $\geq 1$  novel hydrocarbon compd. in a general formula  $X_1(F_1)j(A_1)k(F_2)l(A_2)m(F_3)nX_2$  [A1-2 = (un)subststituted anthracenediyl; F1-3 = (un)substituted fluorenediyl; X1-2 = H, halo, straight, branched or cyclic alkyl, alkoxy, amino, aryl, or (un)substituted amino, aryl or aralkyl, j,m,n = 0, 1; k,l = 1, 2] having an anthracene ring and a fluorene ring which are directly bonded with each other. The compd. can be suitably used for prepg. an org. electroluminescent element being excellent in luminous efficiency and having a long luminous life.

AB The title org. compd. is represented by  
 $[Ar_4Ar_5C=CH]_n(Ar_2)_m(Ar_1)_k(Ar_3)_n[CH=Ar_6Ar_7]_t$  (Ar<sub>1</sub> = C<sub>6</sub>-30 arom. divalent group, C<sub>4</sub>-30 heterocyclyl; Ar<sub>2,3</sub> = C<sub>6</sub>-30 arylene, C<sub>4</sub>-30 heterocyclyl; Ar<sub>4-7</sub> = C<sub>6</sub>-20 aryl, C<sub>4</sub>-30 heterocyclyl; k = 1-3; m, n = 1, 2; s, t = 0, 1). An org. **light-emitting** layer of the org. electroluminescence member may contain a recombination site-forming substance which is selected from styrylamines, quinacridones, rubrenes, and coumarines. The org. electroluminescence member contg. the org. compd. as a recombination site-forming substance is also claimed. The use of the org. compd. described above provided high emission efficiency.

GI

AB The material comprises an anthracene deriv. having a formula I (A1, 2 = alkyl, alkoxy, aryloxy, condensed polycyclic, alkylamino, arylamino; R1-16 = H, halogen, cyano, NO<sub>2</sub>, alkyl, alkoxy, aryloxy, alkylthio, arylthio, cyclic group, NH<sub>2</sub>; R1-16 may bond to form a ring). The device has a **light-emitting** layer-contg. plural org. compd. thin films sandwiched between a pair of electrodes, at least one of the films contains the material. The device shows high luminance with efficiency and long life.

AB Phenylanthracene derivs. of the formula A1-L-A2 (A1 and A2 each are a monophenylanthryl or diphenylanthryl group and L is a valence bond or a divalent linkage group, typically arylene) are described. Their use as org. compd. layers of org. electroluminescent (EL) devices, esp. as light-emitting layers for blue light emission or as electron injecting and transporting layers, is indicated.
